DETAILED ACTION

The following action is in response to the amendment filed for application 10/561,032 on February 26, 2008.

Response to Arguments

With regard to applicant's arguments against the election, upon further consideration, it is agreed that it would not be obvious to one of ordinary skill in the art at the time of the invention to replace one single row straight roller bearing or a dual row tapered roller bearing of a pair of bearings supporting a shaft with a single row tapered bearing. Although it is known in the art to use single row tapered bearings to counter the axial forces caused by helical gearing (as pointed out in the cited art), it is not obvious to replace one of the bearings that does not account for axial forces caused by the helical gearing in a wind turbine with a single row tapered pinion.

Also the bearing structure, particularly the rib on the large end of the cup, is specific to the environment and the bearing's orientation within the claimed transmission structure.

Therefore the previous election is rescinded and all the claims have been considered.

Affidavit

The Affidavit filed on February 26, 2008 under 37 CFR 1.131 is sufficient to overcome the Timken and Agata references.

Allowable Subject Matter

Claims 1-17 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art of record fails to show a wind turbine wherein comprising a cone located around the shaft and having a tapered raceway presented outwardly away from the shaft; a cup located in the housing and

having a tapered raceway presented inwardly toward the raceway on the cone; a small rib at the small end of the tapered raceway on the cone; a large rib at the large end of the tapered raceway on the cup; tapered rollers located in a single row between the raceways and between the ribs; and including the remaining structures of claims 1, 10 and 14, respectively.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Gradu, Fox and Folger have been cited to show similar single row tapered bearings.

Hosle and LaBath have been cited to show similar wind turbines employing helical gears.

Cook, Sullivan, Fuhrer and Yamada have been cited to show transmissions employing helical gearing and tapered bearings.
